

Miadei Ganda

Miadei Ganda of Lake Katrin, New York, had end-stage degenerative disease of her left knee.

She was in constant pain and could hardly walk. None of non-operative treatments helped so a total knee replacement was the only option. Ms. Ganda underwent knee replacement surgery at the Monmouth Medical Center (RWJBarnabas Health) performed by Dr. Joel Fechison (Seaview Orthopaedics). “Today I am happy”, she says. Miadei’s son Victor is also very happy for his mother: “My Mom likes to cook, to work in the garden... being able to WALK again is such a great change in her life! We are so grateful to all who made it possible.”
