

Mr. Cecil Portman, 46 y

Mr. Portman of San Antonio, TX, has been dealing with osteoarthritis for years. He had tried stem cell and injections, however, the pain was only alleviated for a few months.

Mrs. Janell Portman: “Cecil and I found out about Operation Walk USA and Dr. Marshall-Rodriguez, the surgeon participating in the program, from a friend who is a pre-op nurse at the South Texas Spine & Surgical Center in San Antonio. Cecil applied right away and was notified he had been chosen to come in for the physical qualification in November. Once that was done we sent in financials and personal info. The process was easy and he qualified all around. Cecil had surgery on his left knee December 9, 2022. Everything went well and recovery is going good. He is in his fourth week of physical therapy with two more to go.

We are so thankful we heard about this program and are very grateful to Operation Walk USA and the entire team of the South Texas Spine & Surgical Center in San Antonio. We will do anything to promote Operation Walk USA. Thank you!”
